### How to send us a sample:

Collect approximately a handful of your pet's fresh faeces (poo) and place into a clean zip-loc bag or screw capped container. If using a zip-loc bag, squeeze out excess air before sealing.

Double-bag the sample and place into an envelope. Send sample(s) along with the laboratory submission form to the address above. Send on the same day you take the sample if possible. Samples can also be hand-delivered to the centre.

Results will be sent by email and an experienced analyst will be available to interpret your results over the phone
